CODA-MED advertisement for tension headaches. Text: 'A new approach to the treatment and relief of TENSION HEADACHE. Try this potent formula with the secret of fighting pain two ways. Tension headache is different from other headaches. It begins when large muscles tense in your neck, tightening muscles around your scalp. These tense muscles pressure sensitive nerves in your neck and cause the pain in your head. This is not the cause of the pain in your head. Doctors recognise this - that's why they call it tension headache. Coda-Med Tension Headache Tablets are a new formula developed with two ingredients to fight the misery of tension headache - by attacking the pain two completely different ways. The first ingredient is a derivative of the hospital paralytic morphine. It works by actually changing the way your brain receives pain signals, and it brings successful relief from bilateral pain. The second ingredient is paracetamol. This provides prompt relief of headache and eases the pain felt by preoccupied nerves in your scalp. This dual-action relief of Coda-Med will soon end the pain and discomfort of tension headache. Remember Coda-Med is working both where you feel the pain and at the muscles which cause the pain so it brings relief faster. Coda-Med is only available from chemists. Look for the red and yellow caps at the pharmacy counter now.' Logo: CODA-MED. Slogan: Lifts the pain misery of tension headache.
