

Fig. 1 Side view of Olga (left) compared to younger female (right) visiting nest on May 28th around 10:20-10:25am. All photos on left were from May 28th early morning ca. 6am-9am and so I assume it was Olga. The later photos I am not real sure about. But note that bird was walking and standing on the eggs which I doubt Olga would be doing.

Fig. 2 Another view of Olga (left) compared to younger female (right) visiting nest on May 28th around 10:20-10:25am.

Fig. 3. Right head view of Olga (left) compared to younger female (right) visiting nest on May 28th around 10:20-10:25am.

Fig. 4. Left head view of Olga (left) compared to younger female (right) visiting nest on May 28th around 10:20-10:25am.

Fig. 5. Another left head view of Olga (left) compared to younger female (right) visiting nest on May 28th around 10:20-10:25am.
